

ADAC/ADACf MOUNTING INSTRUCTIONS

TOP OF UNIT

MOUNTING INSTRUCTIONS:

1. **IMPORTANT: Do not connect the ADAC/ADACf power, optical or RF cabling** until the ADAC/ADACf housing is securely mounted.
2. Select desired mounting orientation of the ADAC/ADACf unit. Please note that the ADAC/ADACf housing provides mounting options for both vertical and horizontal orientations.
3. Cut holes at locations marked with  on mounting template.
4. Choose a location which has a **MINIMUM of 2 in.** of **CLEARANCE** around the unit to allow for proper venting and cable routing.
5. Mark mounting surface through holes cut in locations marked with .
6. Pre-drill marked holes on mounting surface.
7. Install fastener securing devices into holes as necessary to ensure mounting fasteners will be capable of supporting a **MINIMUM load of 50 lbs.**
8. **MAXIMUM SIZE** acceptable fasteners are **#10 Pan Head Screws**.
9. Install fasteners into mounting holes.
10. Fasteners **MUST NOT PROTRUDE MORE** than **0.250 in.** from the mounting surface into the ADAC/ADACf housing.
11. If applicable, remove the DVIS Nano from the right hand side of the unit by unscrewing the three screws that secure the DVIS Nano mounting bracket to the ADAC/ADACf unit. Place the DVIS Nano and mounting bracket aside.
12. Line up the applicable keyholes on the rear of the ADAC/ADACf unit with fasteners on the mounting surface.
13. Push ADAC/ADACf unit against the mounting surface and slide downwards until fasteners are located at the top of the keyholes.
14. Fasten down the screws in the two keyholes in the DVIS Nano mounting slot to firmly secure the unit to the mounting surface.
15. If applicable, replace the DVIS Nano by sliding the mounting bracket into the ADAC/ADACf housing and securing the three screws.
16. Connect ADAC/ADACf power, optical and RF cables as required.
